& CONTROL

INTERNAL SALES GUIDE • NOT FOR CUSTOMER DISTRIBUTION

Control Valve Repair • SAMSON-Certified

How to open the conversation, handle objections, and win the repair - for MMS sales & FSE use only.

THE PITCH - one-line openers by persona

Core message: "We're your control valve repair partner - decades of experience across the major valve brands, repaired and tested locally (in-house and on-site) and SAMSON-certified for factory-standard work."

PERSONA	ONE-LINE OPENER
Maintenance Manager	"When a control valve goes down, we get it evaluated, rebuilt and ANSI-verified locally - without the factory lead time."
Plant Manager	"One certified regional partner for your whole valve bench - evaluation, repair and replacement from a single call."
Engineer	"Our techs are factory-trained and SAMSON-certified - every valve is evaluated and ANSI-verified, hydrotested when specified."
Project Engineer	"Planning a turnaround? Standard configurations turn in 3-4 weeks - let's scope the valve list early."
Purchasing	"We're cost-competitive - priced for certified expertise and repairs that hold up, not the lowest bid."

Where to start: at process plants (ethanol, chemical, F&B), open with the **Maintenance Manager** - they own the repair pain. At smaller shops, go straight to the **Plant Manager**. Pull in **Engineering** when specialty configurations (pressure balancing, flow dividers, perforated plugs) are in play.

HANDLING OBJECTIONS

OBJECTION	INTERNAL STRATEGY	SAY THIS
"We send valves back to the factory."	Closer and faster, with decades of experience. SAMSON-certified, with local techs on call for post-repair support - not a factory queue. When the factory is right, we coordinate it.	"Same factory standard, here in the Central U.S. - certified work plus local techs for support after the repair, without the freight or the factory queue."
"Do you only do SAMSON valves?"	No - we repair across the major brands. Say yes to every opportunity: we hold Masonellan tooling, source other sizes via Eastern Controls, and accept any valve for evaluation. Always offer a SAMSON replacement too, to convert.	"We repair control valves across the major brands. Send it in - we'll evaluate whether it's in our scope, and if not we'll quote a SAMSON replacement or work with the manufacturer."
"What will it cost?"	Quote request form → SAMSON estimates → firm quote (expenses + labor & parts). Position as cost-competitive, not low-cost.	"We're cost-competitive - priced for certified expertise and reliability, not the lowest bid. We'll build a firm quote from the valve details before any work is approved."
"We need it back faster than a month."	3-4 wks applies to standard configurations ; special adders extend lead time.	"Standard configurations run 3-4 weeks. Pressure balancing, flow dividers or perforated plugs add lead time - let's scope it now."
"Do you handle on-site repairs?"	Yes - we self-perform on-site. Tech out in ~24 hrs for emergencies; prefer 2+ weeks' notice. We bring our own tools, scope via a questionnaire, and complete a JSA before work. For non-in-line jobs, the customer pulls the valve first.	"Absolutely - it depends on the valve's size and design, the process media and any hazards, and the service required. Let's scope it together."
"It's bigger than 6 inches."	In-shop and specialty tooling top out at 6" / 300 lb. On-site works when the valve doesn't need opening (generally no 8"+) - otherwise coordinate with the factory.	"Up to 6" we rebuild in-shop. Above that we can handle on-site work that doesn't require opening the valve - or coordinate with the factory for you."

GUIDED QUESTIONS - uncover the gap before you pitch

- › “How are you handling your valve repairs today - factory, a local shop, or in-house?”
- › “What’s on the valve list for your next turnaround - and when would it need to ship to hit that window?”
- › “Outside of SAMSON, what other valve types are you running? (rotary plug, globe, control, angle-seat body valves...)”

Uncover what they value: “What do you value most about how repairs are handled today?” - then match it: **speed** → local turnaround · **quality** → ANSI verification & SAMSON certification · **cost** → cost-competitive value - certified expertise at fair market rates, not the cheapest bid.

⚠ RED FLAGS - PIVOT OR WALK

- ✗ **Mostly two- or three-piece ball valves, or commodity-grade butterfly valves** - repair rarely beats replacement; pivot to a replacement quote.
- ✗ **Steam & high-temperature valves** - heat expands the seat and complicates the rebuild; never promise a successful repair - set expectations at evaluation.
- ✗ **Full rebuild over 6"** - specialty tools stop at 6"; on-site only if the valve doesn't need to be rebuilt (generally no 8"+ on-site) - otherwise pivot to coordinating a solution with the factory.

BATTLE CARD - attack & address

WHAT WE'RE UP AGAINST	OUR SILVER BULLETS
Factory return the default habit - ship it back to the OEM queue	• Decades of local control valve repair - SAMSON-certified for factory standards • Local techs on call for post-repair support - no factory queue; 3-4 wks on standard configs • When the valve is over 6", we work with the factory on an appropriate solution
Independent repair shops cheap generic rebuilds	• Not SAMSON-certified - no OEM parts path, factory specs, or ANSI documentation • Our valve repair technicians are SAMSON certified and go through extensive training
Competitor OEM service networks Fisher / Emerson / Allied & similar	• Fast, local response on the whole valve bench - not just one brand, not a distant service queue • We provide a repair quote and/or SAMSON replacement quote - we always have an option for the customer • One dedicated valve & instrumentation partner across the Central U.S.

FEATURE → OUTCOME

FEATURE	CUSTOMER OUTCOME
Factory-trained, SAMSON-certified technicians - certified on 3522, 3241, 251GR, 82.7 & LTR 43-2 + positioners & accessories	Factory-quality work, done locally.
In-shop repair, 0.5"-6" (to 300 lb flanges), Des Moines	Most process control valves handled in the region.
Every valve evaluated & ANSI-verified - hydrotested when specified	Documented quality on every job.
Cost-competitive rates - priced for expertise, not undercutting	Premium repair quality at fair market value.
Repair and SAMSON replacement quoted on non-SAMSON valves	Customer sees the best-value path - we convert the business.

EASY WINS - where to hit first

FIRST TARGETS

- › Plants with **control valves due for repair** - especially a SAMSON installed base (3241/241GR, 3522, 251GR, 82.7, LTR 43-2) and accounts already **shipping valves to the factory**.
- › Anyone with an **upcoming turnaround** - book a valve walkdown with the local MMS team well in advance (short notice is possible but sub-optimal).

Key message: “One dedicated valve partner for both repairs and replacement - with trusted expertise.”

SUPPORT & KNOWLEDGE

- › **Craig Foster** - ASP program lead: scoping & technical questions.
- › **Service coordination team** - RMA, quotes, scheduling. Route every quote & timeline through them.
- › **SAMSON-certified technicians:** Craig Foster, Kyle Coon & Trevor Rutcosky.
- › **QR quick links:**
