

KEY TALKING POINTS

- Most facilities are running on asset data that **doesn't match reality**.
- The cost is real:** unplanned outages cost up to 70% more than planned ones, and PSM gaps drive OSHA fines.
- Signal** sends a qualified technician to walk down your facility, capture verified asset data, and turn it into actionable intelligence for reliability, compliance, obsolescence, and inventory.

THE PROBLEM

Install base doesn't match CMMS or P&IDs

Spare parts inventory is misaligned

Aging and obsolete devices are hidden

Teams stuck in reactive maintenance

PSM / OSHA compliance lacks trusted data

HOW WE HELP

Verified field walkdown of every instrument and valve.

Spare strategy aligned to what's actually installed.

Lifecycle intelligence to phase modernization.

Verified database becomes the foundation for proactive.

Verified Process Safety Information ready for upload.

HOW WE EXECUTE · THE WORKFLOW

1 WALKDOWN

Qualified technician walks down your facility, collecting data and taking photos.

2 DATABASE

Database is developed for data processing and future maintainability.

3 ANALYZE

Analyze the data collected for valuable intelligence.

4 ADVISE

Signal advises on spare strategy, lifecycle data, obsolescence, and device strategies.

WHAT THIS IS NOT

IBI does **not** include asset health monitoring - that is a separate offering, *Signal Asset Health Intelligence*.

OBJECTION HANDLERS

"We already have a CMMS."

A walkdown verifies what's actually installed vs. what CMMS says. The gap is where risk lives.

"We don't have budget this year."

A pilot walkdown on one area is low-cost. ROI is common via spare optimization alone.

"We already did a walkdown."

When? How has the facility changed? Our database enables ongoing reliability and PSM work.
